Project 2: Ephemera / Multi-Representational

For the second project you are asked to build a 3 dimensional website or multiple sites that use the internet in unconventional ways. Use your skills in JavaScript, ThreeJS and Aframe to build a webpage as an art installation. Try to use the capabilities of JavaScript to the best of your abilities to explore advanced visualization techniques and networking techniques among other creative uses of the medium. Visual form and design will be considered a component of this work, so be sure to spend time producing the highest quality representation you can. Also make sure to document your output and code with comments and appropriate labels for clarity of comprehension of what you expect the viewer to understand from the data set.

As always if you have any questions or concerns technically or conceptually feel free to contact me: andrew@andrewblanton.com or come to office hours at Art 311 from 11-12 p.m. on Tuesdays and Thursdays.
